(54) Title: METHOD FOR AUTOMATICALLY SETTING NETWORK

(57) Abstract: Disclosed is a method for automatically setting a network so that UPnP devices connected to a network composed of different IP segments can be communicated one another. The method comprises: receiving an event message transmitted from a device connected to a network; requesting a routing table to all devices connected to the network except said device; and adding an IP address of said device to the routing tables inside all the devices.
